

IT Consulting

AdNovum shares its significant IT knowledge and expertise in the form of valuable consulting services with its customers. Our consultants excel through their deep understanding of modern technology, its productive potential, and innovative capabilities. All AdNovum consultants are accredited engineers with at least 5 years of practical experience in project implementation. They are well-versed in AdNovum's solution portfolio, including the products of partners and third parties.

As a customer, you are guaranteed that the consultant has the required expert knowledge regarding IT and business issues, understands your requirements, and can quickly identify appropriate solutions.

Engineers as advisors

AdNovum engineers actively keep abreast of technological developments and are closely connected to the entire knowledge pool of AdNovum. This enables them to quickly find adequate solutions even to very specific problems. AdNovum's IT consulting service is focused on the areas of architecture, security and software engineering. Our consultants perform reviews and audits, create concepts and

designs, and pass on their knowledge and experience through training and instruction.

AdNovum's professional consulting services are needs-based and requirements-oriented. They are fully independent from any individual technology or 3rd-party provider and follow best practice guidelines and concepts.

Highlights

IT Consulting: an AdNovum core competence

AdNovum's service offering covers four core areas. The four areas seamlessly overlap, mutually drawing on their individual specific strengths. This approach fosters continued innovation, while at the same time ensuring consistent delivery of reliable and appropriate solutions. And it allows AdNovum to assist its customers, enabling them to effectively master today's technical and organizational challenges.
