Cloud Security Assessment

Does your cloud solution meet your security requirements?

There is a tremendous development of technology with regards to cloud solutions. As a result, the needs and requirements of both cloud providers and users change constantly. In such an environment, in addition to choosing an appropriate provider, a regular security review is extremely important. A cloud security assessment will help you to identify risks early on, assess them correctly and respond in an adequate way.

Initial situation

When using a cloud solution, questions arise such as:

- How secure are my data in the adopted solution?
- What risks do I take by using a specific cloud solution?
- How serious are the business risks and how do I manage them?
- Is there a strategy in place for exceptional situations and emergencies such as power and network outages, natural disasters or bankruptcy of the supplier?
- Can I rely on the contractually guaranteed mechanisms and the monitoring of the services?
- Is my exit strategy sufficient or do I run a latent business risk?

Our service

In a cloud security assessment, we analyze the cloud solution you use in a series of workshops together with you.
We take up your requests and needs and systematically examine your security risks and strategies for dealing with the risks identified. Thus we identify residual risks and, on request, also point to solutions how you can manage these risks.
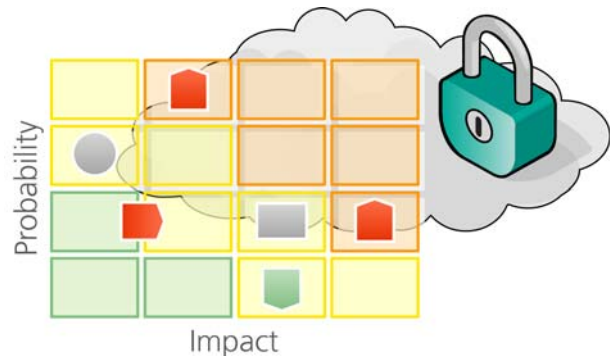

Your benefits

The analysis includes both operational and physical security, access management, compliance and data protection, management of incidents, and business continuity management. Thanks to the high level of coverage, the assessment provides a solid basis for future decisions.

AdNovum has been active in the field of IT security for 25 years and draws on its experience with a broad customer base across various industries. Such extensive experience makes sure that the obtained results meet your needs and you derive a direct practical benefit. We will be happy to also advise you during the evaluation and specification phase or support you in implementing the measures resulting from an assessment.
