

Adnovum ESG Rating Tool

The ESG Rating Tool allows the simple import and refinement of ESG data from various external providers with your in-house calculation models as well as the adjustment of the resulting values according to your internal guidelines. It is built on an automated, fully integrated Azure cloud solution, although a pure «on premise» solution is also feasible if desired.

Following the processing of the data, the ESG scores are exported directly into your systems or interfaces. This ensures that your own opinion is correctly reflected at all times and becomes an integral part of your consulting services. Your employees and customers have around the clock access to up-to-date information to make sustainable investment decisions on this basis. You benefit from both information obtained externally and the know-how of your own experts.

Thanks to the modern and easy-to-use GUI, the entire ESG rating process is also more straightforward than ever, supporting your investment and go-to-market strategies with the highest possible flexibility and adaptability.

Your benefits

- Use of a modern, convenient and future-proof tool
- Additional flexibility through the use of a secure cloud solution
- Full adaptability when taking into account your own calculation models and parameters
- Creation of a reliable information base and the necessary transparency to ensure the best possible investment decision for your customers

Solution highlights

- Flexible integration of ESG data from various external providers
- Efficient combination of externally provided data with your individual parameters and algorithms to determine the bank's own investment strategy
- Delivery of results directly to existing systems or interfaces

Integration and application

- Data evaluation takes currently place within a few minutes only
- Easily customizable control interface
- Individually parametrizable
- Besides the Azure Cloud-based solution, an «on premise» setup is also available on request
- May be integrated into any core system
