

Reduce the Attack Surface. Increase Resilience. Use AI Securely.

Your Microsoft 365 tenant – standardized, hardened, and automated in only 90 days

The problem

M365 is complex – and not «secure by default»

1. Many admin portals, high frequency of changes
2. Security is displaced by productivity defaults
3. Configuration drift und audit risks are everyday issues

Your benefits

- Secure AI usage thanks to stable baselines
- Audit readiness for FINMA, DORA, and ISO
- Less effort – more control

Our Solution

Attack Surface Reduction (ASR) as a Managed Service

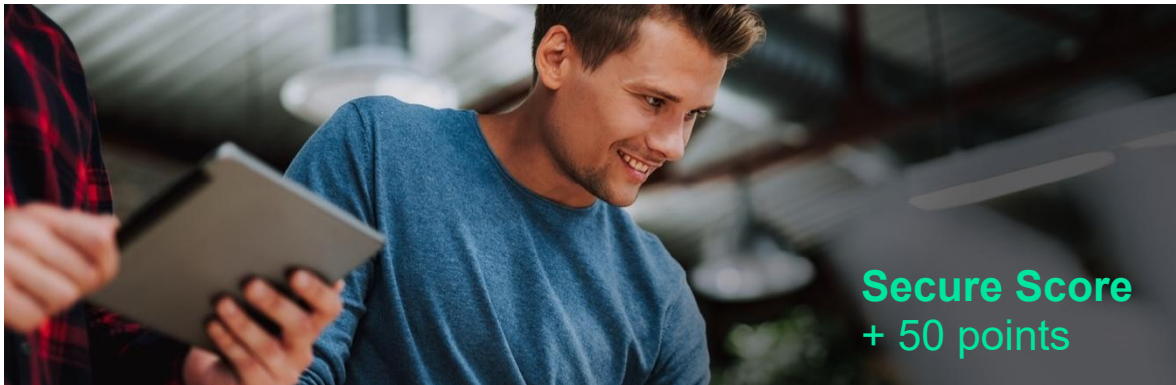

- Use existing Microsoft features correctly
- Stabilize baselines – automatically correct drift
- Increase your Secure Score through targeted measures

Book an ASR kickstart now!
30 days with measurable results

[Book a slot](#)

Achieve greater security with ASR in three steps:

1. Assessment

- Analysis
- Gap report
- Prioritization

2. Pilot

- 50-100 devices
- Baseline activation

3. Rollout

- Auto-remediation
- KPI review
- Reporting

Why ASR?

- Not a one-off «hardening shot», but continuous control
- All measures documented, audit-proof, and version-controlled
- Foundation for resilient IT and AI initiatives

What ASR offers:

- Zero-trust operation with auto-remediation
- KPI cockpit für audit, reporting, and management
- No zoo of tools: 100% Microsoft first

Your results – measurable in 90 days:

KPI	Result
Compliance	> 95%
Secure Score	+ 50 points
MTTR	< 14 days

MTTR = mean time to repair critical issues
(discovery → fix in the tenant)

Three protection levels for your organization:

Basic

Transparency and stabilization

Standard

Auto-remediation and reporting

Enterprise

Darknet monitoring and XDR
